Massage Bathtub

Air Hydrotherapy

Air Hydrotherapy bath generates millions of warm air bubbles that enter the bath through strategically spaced holes in the bottom radius of the bath. Imagine lying back in a bath of bubbly champagne, the feathery touch of the bubbles reach just below your skin's surface for a delicate full-body massage

Whirlpool Hydrotherapy

A whirlpool bath features hydrotherapy consisting of the combination of pressurized water and air delivered through strategically positioned jets. The robust yet gentle force transfers energy deep into the muscle tissue providing a deep tissue massage. It's like a deeply soothing massage at the hands of a skilled professional, both relaxing and invigorating.

Outdoor SPA

benefits

The heat, buoyancy and massage elements of a hot tub can provide a number of health benefits. People with nagging aches or pains, stiff muscles, circulation problems, headaches, sleep disturbances and chronic medical conditions like diabetes, chronic fatigue syndrome, fibromyalgia and arthritis may alleviate their symptoms and stimulate healing with hot tub therapy.

Stress Relief and Sleep Benefits

Hot tubs can relieve stress and improve sleep. The massaging jets and soothing heat help to reduce tension which may make it easier to fall asleep. The weightlessness effect produced by the buoyancy of the water can also be relaxing. Sitting in a hot tub raises body temperature, and the drop in body temperature that occurs after getting out of a hot tub may also induce sleep. Studies suggest that spending 15 minutes in a hot tub 90 minutes before bedtime can lead to an improved night's sleep.

Muscle Relaxation and Joint Pain Relief

Massaging hot tub jets work to relax muscles and relieve pressure on nerves. In addition, the buoyancy provided by the water reduces body weight by 90 percent, taking pressure off joints. Hydrotherapy in a hot tub can provide symptom relief to some people with arthritis and rheumatoid arthritis. The Arthritis Foundation notes that muscle relaxation, decreased pain and stiffness and increased ease of performing daily activities and exercises are all potential benefits from heat therapies such as soaking in a hot tub.

Blood Pressure and Circulation

Heat from hot tubs can cause the blood vessels to open up (called vasodilation), which decrease blood pressure. The heat and massage ease blood flow and improve circulation, in addition to stimulating nerve impulses that boost the immune system and digestion.

According to the American Heart Association, individuals with high blood pressure who have been advised to refrain from other activities that cause vasodilation (such as exercise) should also avoid using hot tubs. You should also not drink alcohol or move back and forth between cold water and hot tubs as this can increase blood pressure.

Sauna Room

benefits

Sauna room raises your skin temperature to 104 degrees F and your internal temperature to 100.4 degrees F, causing your heart rate to speed up and your blood vessels to dilate. Sessions in a sauna room are usually short; you only need 10 to 20 minutes to create a good sweat and reap the sauna's benefits.

RELAXATION

The primary benefit of a sauna room is its ability to relax and de-stress you. The increased heat soothes sore and tense muscles all over your body, giving you a refreshed feeling once your session is complete. The increased blood flow also helps bring more oxygen to those sore and tense areas. Using a sauna after exercise will also help your body relax while keeping your heart rate up.

CLEANSING

The most noticeable effect of a sauna room is that it makes you sweat. The process of sweating cleanses your skin, but also cleanses toxins from food and drink out of your body. This kind of cleansing in a sauna room can help give your liver and kidneys a lighter load, and can help people with liver and kidney problems—check with your doctor first—although it is not a replacement for proper eating.

HEART RATE

While in a sauna room, your heart rate will increase and your blood vessels will dilate. This allows your body to pump more blood throughout your body without significantly raising your blood pressure; the effect is similar to that of a brisk walk. While this is no replacement for exercise, it is a great way to boost blood flow, especially to the extremities and upper skin layers, where blood circulation is usually minimal.

Steam Room

benefits

Steam rooms provide many therapeutic services. They help you relax, relieve stress and sore muscles, improve blood circulation, rejuvenate skin and reduce sinus congestion. Steam room therapy offers a number of benefits when used properly. Those with heart conditions, diabetes and high blood pressure should consult a physician before entering a steam room.

Stress Relief

The heat and moisture combination in steam rooms offer a relaxing atmosphere. Stress is a part of our daily lives and can lead to high blood pressure, migraine headaches and heart problems. Steam rooms help calm your mind and lower stress levels.

Sore Muscles

Overworked muscles and joints can benefit from time in a steam room. Heat dilates blood vessels, which in turn improves circulation. Blood carries oxygen and other nutrients to the site of soreness and helps it heal more quickly.

Skin Rejuvenation

Steam hydrates skin pores and opens them up so that toxins can be flushed out. Sweating gets accumulated dirt and grime out of pores, which prevents pimples and blackheads. More efficient blood circulation also gives your skin a healthy glow.

Respiratory Relief

Research studies done at the University of Munich's Institute of Medical Balneology and Climatology found that steam rooms are useful to those with asthma, allergies, bronchitis and sinusitis. Those with respiratory problems enjoy steam rooms because they soothe throat irritation, loosen phlegm in the lungs and loosen mucous in the nose.
